The concerns over the future of the Sims franchise are well known, but perhaps the worst is what people are fearing about the already released content. If you buy the game and see bugs, or its just too hard to figure out on your own, and then you find the rest of the content is on your hard drive, and you can't play it, EA has already screwed you over. For those that can afford the rest of the game, its unlikely that you will be able to play the endgame content as the game is most likely bugged or tampered with, and other issues will hamper your ability to finish the game. EA will not refund the money for a hacked game, but they may give a free copy of the game to people who lose their save files. This is a rather shady tactic, as you have no way of knowing if there are any major changes to the game since your previous build from a hack. If you hack the game, it will stop working soon anyway, as the game inevitably will receive updates to fix any and all issues that the hack introduces. Endgame DLC is also known to be heavily similar to the DLC already included in the game, often just an updated version of it. Sometimes, once they have been released, the big changes make people stop thinking about what may be in the game, as they no longer have to worry about the rare bug they may have missed. This can happen with especially larger games, as some are expected to have so many different optional additions that people may stop caring. In the case of the Sims, this is very true. Although there is a lot of content in the game, the ending is really where the bulk of the fun comes from. The Sims Trilogy was expected to make things interesting, and brought a lot of new features, but it ended up leaving a lot to be desired. Another issue with DLC is the lack of

communication, at least by EA, when more DLC is being made. Sometimes, people spend money on DLC which is made by EA GameFreak, only to find that the DLC is already made, and EA GameFreak is the one removing content and fixing bugs. For the long-running series, you can never be too sure what is going to happen. EA may continue on and on or cancel it, and then work on another console release instead. The time between CD release to full retail release is getting longer and longer each time, and it is clear that the Sims are a product that EA is basically working in a vacuum, neglecting the fan base of the franchise as EA focuses more on the future. People should be aware of this before they buy the game, because there is no real reason for them to be surprised if the game is hacked or tainted in some way. You can buy the game now without fear, but if EA ever take it over and make changes or suddenly force a patch to remove content or fix bugs, that will be a sad day in the franchise. 5ec8ef588b
